TO WHOMSOEVER IT MAY CONCERN

At Actylis, we are constantly looking for ways to improve our processes and ensure the highest quality standards for our products and as part of our organizational update, we would like to inform you about the change in our Brand Logo colour. We will be transitioning from our old brand logo colour to the new one.

Key Changes:

The change to the logo reflects our environmental and sustainability focus across multiple industry segments, using the subtle hand-shake shape to evoke the partnership relationships we have with our customers. (refer the image -1)

Image - 01 : New Logo

Image - 02 : Old Logo

Impact of this Change –

Due to this Minor change in unified global brand logo colour, there will be no impact on our existing quality system, manufacturing process, testing, release, VQ documents etc. w.r.t the document content and compliance part, though all our documents related to products and process are in the phase to implement the updated Logo colour (both in internal and external Systems).

This might be possible that you may find labels and packaging material with old logo colour or sometimes with new logo colour as existing inventory will also be used and exhausted during this transition. The logo colour in/of historic and existing documents will remain unaffected and will be updated on defined next periodic revision. The implementation of the above-mentioned change will take place gradually and will be completed by 31/Dec/2026. During this transition, Aceto Pharma (India) Pvt. Ltd. will support you to answer to all related queries.

Thank you for your continued trust and partnership.

Globally Harmonised System

GHS Pictograms and Hazards

The GHS is an acronym for The Globally Harmonized System of Classification and Labeling of Chemicals. The GHS is a system for standardizing and harmonizing the classification and labeling of chemicals. It is a logical and comprehensive approach to:

- Defining health, physical and environmental hazards of chemicals
- Creating classification processes that use available data on chemicals for comparison with the defined hazard criteria
- Communicating hazard information, as well as protective measures, on labels and Material Safety Data Sheets (MSDS)

The hazard communication is made through GHS Pictograms depicted below that indicate the potential hazard of the product.

Health Hazard 	Flame 	Exclamation Mark 
• Carcinogen • Mutagenicity • Reproductive Toxicity • Respiratory Sensitizer • Target Organ Toxicity • Aspiration Toxicity	• Flammables • Pyrophorics • Self-Heating • Emits Flammable Gas • Self-Reactives • Organic Peroxides	• Irritant (skin and eye) • Skin Sensitizer • Acute Toxicity (harmful) • Narcotic Effects • Respiratory Tract Irritant • Hazardous to Ozone Layer (Non Mandatory)
Gases Under Pressure 	Corrosion 	Exploding Bomb 
• Compressed Gas • Liquefied Gas • Dissolved Gas • Refrigerated Liquefied Gas	• Skin Corrosion / burns • Eye Damage • Corrosive to Metals	• Explosives • Self-Reactives • Organic Peroxides
Flame Over Circle 	Environment Non-Mandatory 	Skull & Crossbones 
• Oxidizers	• Aquatic Toxicity	• Acute Toxicity (Fatal or Toxic)

Label Information

The designed labels are visually appealing, offer comprehensive product details, and a special emphasis is on handling, storage and safety information along with the hazard pictograms adhering to GHS Compliance.
